简章

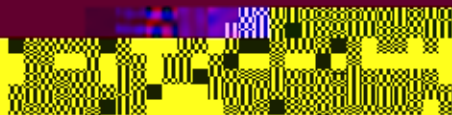

Figure 1. Plant specimen of *...*

Figure 2. Plant specimen of *...*

The first part of the text discusses the morphology and distribution of the plant species, mentioning its occurrence in the mountains of the region.

The second part describes the detailed characteristics of the plant, including its growth habit and the structure of its leaves and flowers.

The third part discusses the ecological requirements of the plant, such as its preference for specific soil types and altitudes.

The fourth part mentions the collection of the specimen, including the date and the collector's name.

The fifth part provides a detailed description of the plant's reproductive organs, including the structure of the stamens and the ovary.

The sixth part discusses the relationship between the plant and its environment, including its role in the local ecosystem.

The seventh part concludes the text with a summary of the findings and a reference to the relevant literature.
